Advanced Calculator Test

Description

Develop a GUI calculator using that meets the requirements specified. Use the OS calculator as a comparison tool.

Requirements

The program requires the following features:

- It should allow addition.
- It should allow subtraction.
- It should allow division.
- It should allow multiplication.
- It should have a display, showing the current digits and the temporary result.
- It should be able to chain operations (E.g. 1 * 2 + 3).
- It should have a toggle between client & server side calculations (if server side is selected, calculations will be made using AJAX requests).

Deliverables

The following items must be delivered in a zip file:

- All source code.
- Compiled executable, if applicable.
- User manual in PDF format.

Provide a cloud storage link if needed (Dropbox, Google Drive, etc).

Evaluation

The following will be evaluated:

- Source code efficiency & organization.
- Coding practices.
- Visual style & appearance.
- Feature inclusion & completion.
- Deliverable format.
